

## MESSAGE

Artificial intelligence and emerging technologies are going to be a boon for the growth of humanity as the same have opened multiple avenues in the unexplored area. AI technologies like translation of judgements in various languages, ChatBot, speech to text and document summarisation tools offer great scope to augment the judicial system. Simultaneously, AI technologies may have also a deep impact on the society, if not regulated. Deep fake videos, doctored images, AI Voice generator and online frauds *etc.* are few instances of its impact which is a big concern for the law enforcing agencies including courts. I am glad to know that the issues relating to AI and emerging technologies shall be addressed by eminent speakers including Mr. Vint Cerf, Father of the Internet.

I extend my best wishes to the organizers for conducting the international conference on the pivotal topic "*Rise of Artificial Intelligence, Emerging technologies and their Impact*".

I wish all the success to the organizers.

*Justice Manmohan  
Acting Chief Justice, Delhi High Court*
